

Finally White

Contactless Procedures for

Teeth Whitening

Two methods you can use with the products you already have access to!

Please make sure you are following your local legal guidelines. Regulations will always take precedence.

Now you can offer the same great service and maintain a drastically lower* risk of contracting/spreading the COVID19 virus.

*compared to the original hands on procedure used

Finally White

USING THE PEN/SYRINGE

CONTACTLESS PROCEDURE

- Wear gloves and a mask (as usual) for all your clients.
- Prior to your appointment, set up your station/lay out supplies.
- Attach the bib to the clip for them to easily put around their neck.
- Show the client how to insert the cheek retractor with the diagram or demonstrate it on yourself from a safe distance.
- Crack the vit.e swab beforehand. They will apply it to their lips and gums.
- Your client can use a pen and apply the gel to their own teeth while you supervise. Alternatively you can dispense your (syringe) gel into the dish and have them apply with the microbrush, like you normally would have.
- You will instruct them to place the goggles on and position/start the light for them.
- If possible, have them get up and rinse in a sink instead of staying in the chair with a swish/spit method.
- The procedure is the exact same but you've now provided contactless teeth whitening.

It's crucial to ensure you sanitize your station between clients, discard your supplies and be safe.

I recommend prescreening your clients and offering hand sanitizer to be used upon arrival.
